INTRODUCTION

The following volume includes copies of computer print-outs for the General Public Survey, the Survey of Library Users, and the Children's Library Survey. In order to decrease the cost of the computer analysis, many of the questions were run together within single tables; therefore, percentages are based on the total number of questionnaires, rather than the number of responses to individual questions. The percentages used within the report are generally based on the number of people responding to particular questions. These have been computed by using the print-outs, subtracting the non-response, and recomputing the percentages so that they reflect the number of individuals who responded to particular questions.
